EDUCATION

University of Washington

Engineering Undeclared; intended Mechanical Engineering major
Intended minor: Applied Mathematics

Seattle, WA

Autumn 2026 – Present

Edmonds College

Associate in Science, Track 2; GPA: 3.9/4.0

Edmonds, WA

Expected Oct. 2026

PROJECTS

Battery Babysitter | *Enclosure Design, Electronics Integration*

Rocketry Club

- Collaborated with a teammate to build a portable case for two lithium battery charging and status boards used at rocket launches.
- Drilled openings for power cables and secured both boards to a repurposed plastic mount; organized components around wiring and ease of use.

Magnetic Boat | *Electromagnetism, Experimental Data*

Physics 222 Lab

- In an equally contributing team, tested a magnet-equipped boat at four solenoid current settings over a 28.5 cm travel span.
- Average travel time decreased from 20.1 s at about 0.19 A to 12.5 s at about 0.34 A; evaluated sources of measurement error.

Mass-Spring System | *Differential Equations, Motion Sensing*

Physics Lab

- With an equally contributing partner, estimated spring stiffness and damping from measured displacement and motion.
- Solved and graphed models for five starting positions; compared them with recorded oscillations and identified underdamping.

Remote-Control Aircraft | *Mechanical Design, Modeling*

In progress

- Collaborating with friends on a functional RC plane and applying calculus and physics to aspects of its design.

LEADERSHIP

Eagle Scout Project

Feb. 2026

Troop 300

Edmonds, WA

- Planned, fundraised for, and led volunteers in replacing two deteriorating outdoor benches at St. Paul's Orthodox Church.
- Coordinated materials, work sessions, staining, installation, and the final project report.

Senior Patrol Leader

Troop 300; National Youth Leadership Training

Edmonds, WA

- Led Troop 300 as Senior Patrol Leader; applied SMART goals and the EDGE method in troop leadership.

TECHNICAL SKILLS

Engineering: CAD certificate and engineering graphics, soldering, basic circuitry, mechanical prototyping

Analysis: Calculus-based physics labs, experimental measurement, differential equations, mathematical modeling

Programming: Java, Python, MATLAB, JavaScript

Communication: Technical writing, project planning, team leadership
